About the Conference

Transdisciplinary Integration of Life Sciences, Physical Sciences, Engineering, and Beyond Just as advances in information technology, materials, imaging, nanotechnology and related fields — coupled with advances in computing, modeling and simulation — have transformed the physical sciences, so are they are beginning to transform life science. This century at the research every discipline converges. "This conference is a broad rethinking of how all scientific research can be conducted, so that we capitalize on a range of knowledge bases, from microbiology to computer science to engineering design, from God Particle to Astrophysics". Purpose is to congregate the researchers from all the disciplines to discuss how to solve the new scientific challenges to the mankind.
